

## Bladder Health Awareness Month

### Male Stress Incontinence

Male Stress Incontinence (SUI) is a common issue that may be sudden and uncontrolled causing a struggle on quality of life. The increase in abdominal pressure may be causing involuntary leakage of urine from the bladder. This may be the outcome from coughing, laughing, stress, and exercise. Bulkamid can be used in both men and women.

# 1 in 3 Men Suffer From SUI

## Say Goodbye to Bladder Leaks

Leaking urine after a prostatectomy is quite common. This side effect usually goes back to normal within a few months, but it can be frustrating while enduring it. Bulkamid is a treatment option for most men.

Bulkamid is a urethral bulking agent that is used to treat stress urinary incontinence. It is a soft, water-based gel that can be used to restore the natural closing of the urethra.

## Benefits of Bulkamid

Long-Lasting Relief

Simple Procedure

Safe & Effective

No Hospital Stay

Outpatient or In-Office

**1 out of 3 Women**  
experience SUI at some  
point in their lives

### Stress Urinary Incontinence (SUI)

Incontinence is more common than you think. In fact, one out of three women can suffer from Stress Urinary Incontinence (SUI). The good news is you don't have to live with it.

## Benign Prostatic Hyperplasia

Benign Prostatic Hyperplasia, or BPH, is a condition in which the prostate enlarges as men get older. BPH is a very common condition that affects nearly

40 million Americans and over 500 million aging men worldwide. Over 40% of men in their 50s and over 70% of men in their 60s have BPH. While BPH is a benign condition and unrelated to prostate cancer, it can greatly affect a man's quality of life.

MORE THAN  
**50%**  
are unaware that **delaying treatment** of BPH/enlarged prostate **could lead to permanent bladder damage**
