Have You Been Thinking About A Vasectomy Reversal?

Many men who have undergone a vasectomy have later expressed a desire to have it undone. Experts estimate that 6% to 15% of men who have vasectomies eventually have a change of heart and undergo a vasectomy reversal, a procedure that makes pregnancy possible again. Vasectomy reversal, while a complex procedure, offers many men a second chance at natural conception. Call to schedule a consultation. Dr. Harris will be able to answer all questions prior to scheduling your procedure.

Cystoscopy Procedures

A cystoscopy is a procedure that lets your doctor look directly inside your urethra and bladder through a telescope (cystoscope). In men, the prostate gland wraps around the urethra near the bladder. This area can also be visualized during a cystoscopy. The procedure will be performed while you are awake. It generally takes less than five minutes for the doctor to complete the procedure.
